

# DATA FOR **PROGRESS**

From May 16 to 19, 2025, Data for Progress conducted a survey of 1,160 U.S. likely voters nationally using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and recalled presidential vote. The survey was conducted in English. The margin of error associated with the sample size is  $\pm 3$  percentage points. Results for subgroups of the sample are subject to increased margins of error. Partisanship reflected in tabulations is based on self-identified party affiliation, not partisan registration. For more information please visit [dataforprogress.org/our-methodology](https://dataforprogress.org/our-methodology).

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=1,160 unless otherwise specified.

**[1]** Some lawmakers in Congress have proposed legislation that would **prevent all states and localities** from regulating artificial intelligence (AI) or automated decision-making systems for the next ten years.

Do you support or oppose this proposal?
