

## DATA FOR PROGRESS

From March 5 to 13, 2026, Data for Progress conducted a survey of 648 likely voters in New York using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and recalled presidential vote. The survey was conducted in English. The margin of error associated with the sample size is  $\pm 4$  percentage points. Results for subgroups of the sample are subject to increased margins of error. Partisanship reflected in tabulations is based on self-identified party affiliation, not partisan registration. For more information please visit [dataforprogress.org/our-methodology](https://dataforprogress.org/our-methodology).

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=648 unless otherwise specified.

[21] Home insurance rates are increasing, in part due to increasing extreme weather events.

To address these rate increases, New York lawmakers are considering a bill that would allow the state Attorney General to sue the oil and gas industry to recover those costs, instead of insurers passing those costs onto New Yorkers.

Opponents of the bill say that oil and gas companies would simply pass any costs onto consumers through higher energy prices. They also say that climate change is a global problem, and it's unfair to single out only energy companies for weather events that everyone contributes to. They argue that, for this reason, those companies should not be made to pay for rate increases.
