

# DATA FOR PROGRESS

From November 16 to 17, 2021, Data for Progress conducted a survey of 528 likely Democratic primary voters in New York using SMS text-to-web to contact voters. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and voting history. The survey was conducted in English. The margin of error is  $\pm 4$  percentage points.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=528 unless otherwise specified.
