

DATA FOR PROGRESS

From November 8 to 10, 2022, Data for Progress conducted a survey of 1,332 likely voters nationally using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and voting history, including self-reported vote in the 2022 election. The survey was conducted in English. The margin of error is ± 3 percentage points.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=1,332 unless otherwise specified.

[1] For each of the following scenarios, please indicate whether you think this scenario is likely or unlikely to happen over the next two years.

— More political violence driven by far-right extremist groups
