

From November 22 to 29, 2022, Data for Progress conducted a survey of 761 likely voters in New York using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and voting history. The survey was conducted in English. The margin of error is  $\pm 4$  percentage points.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=761 unless otherwise specified.

**[1]** Currently in New York, tipped workers in restaurants and bars can be paid just two-thirds of the minimum wage. This means they must rely on tips for much of their income.

Some state lawmakers are proposing a bill to require that employers pay tipped workers the full minimum wage. Any tips workers receive would be in addition to the minimum wages they receive.

Would you support or oppose this proposal to require that employers in New York pay tipped workers the full minimum wage?
