

DATA FOR PROGRESS

From January 18 to 20, 2023, Data for Progress conducted a survey of 1,225 likely voters nationally using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and voting history. The survey was conducted in English. The margin of error is ± 3 percentage points.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=1,225 unless otherwise specified.

[1] Would you support or oppose building new high-voltage power lines, which would increase the availability of low-cost electricity to more Americans, **in your community?** (N=391)

[7] To reliably deliver electricity from where it's generated to buildings and homes, experts say we need to build new, high voltage power lines that cross state lines.

However, power lines that cross multiple states are often held up by a permitting process that takes about 10 years on average.

Knowing this, do you support or oppose reducing the amount of time it takes to approve new interstate power lines?

[8] Some lawmakers have proposed reducing the amount of time it takes to approve new electricity transmission projects, like high-voltage, interstate power lines.

One solution would be to give the federal government the authority to approve new interstate power lines, while state and local officials would keep their authority over power lines within the state.

Do you support or oppose this solution?
