

DATA FOR **PROGRESS**

From February 16 to 21, 2023, Data for Progress conducted a survey of 1,199 likely voters nationally using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and voting history. The survey was conducted in English. The margin of error is ± 3 percentage points.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=1,199 unless otherwise specified.

[1] How concerned or not concerned are you about extreme heat events impacting each of the following?

— Your physical health

[9] Extreme heat poses health risks, causing heat stroke, dehydration, and even death. These risks are higher for low-income Americans, who may lack access to air conditioning.

Some states allow their utility providers to shut off energy access if customers are behind on payment, even during heat waves. This forces low-income Americans to risk potentially fatal health consequences because they cannot afford their utility bills.

Lawmakers are considering passing a law to prevent utility shut-offs during extreme heat events.

Would you support or oppose a federal law that prevents utility shut-offs during extreme heat events?

[10] In most of the United States, landlords are not obligated to provide renters with an air conditioner or other indoor cooling devices. This contrasts with the treatment of home heating, which is generally accepted as a basic obligation during winter months.

Would you support or oppose requiring landlords to provide renters with air conditioning or indoor cooling in areas that experience extreme heat events?

[22] Currently, air conditioning is not required in many state- and federally-owned buildings, including housing and prisons, creating dangerous and uncomfortable conditions for some of the most vulnerable Americans.

Would you support or oppose requiring air conditioning in state- and federally-owned buildings, including housing and prisons?

[23] The Low Income Household Energy Assistance Program (LIHEAP) provides federally funded assistance to reduce the costs associated with home energy bills, energy crises, weatherization, and minor energy-related home repairs. However, LIHEAP is historically underfunded and only serves a fraction of eligible recipients.

The Heating and Cooling Relief Act would increase annual funding for LIHEAP and expand eligibility to ensure that no household pays more than 3 percent of its annual income on energy costs.

Would you support or oppose the Heating and Cooling Relief Act?

[24] The heat island effect refers to the observation that urban areas have higher temperatures compared to rural areas because they have more heat-absorbing surfaces, like concrete buildings and pavements.

Cool roofs and cool pavements are designed to reflect less sunlight, and can help combat the heat island effect, thus reducing the temperature in urban areas.

Would you support or oppose your state or municipality investing in cool roofs and cool pavements?

[25] Extreme heat disproportionately affects marginalized communities, including low-income communities and communities of color. Members of marginalized communities are more likely to live in urban heat islands, where they experience higher temperatures compared to rural areas because urban areas have more heat-absorbing surfaces, like concrete buildings and pavements.

Because of these risk factors, members of marginalized communities are also more likely to suffer illness resulting from extreme heat.

Would you support or oppose programs that specifically invest in cooling infrastructure for marginalized communities?
