

From April 26 to 29, 2024, Data for Progress conducted a survey of 1,265 U.S. likely voters nationally using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and voting history. The survey was conducted in English. The margin of error associated with the sample size is ±3 percentage points.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Results for crosstabs of subgroups of the sample are subject to increased margins of error. Partisanship reflected in tabulations is based on self-identified party affiliation, not partisan registration. The design effect for this survey is 1.34. Some values may not add up to 100 due to rounding. For more information, visit dataforprogress.org/our-methodology.

N=1,265 unless otherwise specified.
