

DATA FOR **PROGRESS**

From October 15 to 27, 2025, Data for Progress conducted a survey of 770 likely voters in Colorado using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and recalled presidential vote. The survey was conducted in English. The margin of error associated with the sample size is ± 4 percentage points. Results for subgroups of the sample are subject to increased margins of error. Partisanship reflected in tabulations is based on self-identified party affiliation, not partisan registration. For more information please visit dataforprogress.org/our-methodology.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=770 unless otherwise specified.

[45] Humans have burned fossil fuels like coal, oil, and gas for electricity, heat, and transportation since the mid-1800s. Burning these fuels has released a significant amount of carbon dioxide (CO2) pollution into the atmosphere. Carbon dioxide traps the sun's heat and warms the Earth like a blanket. As human activities have increased, so has the layer of carbon dioxide pollution, leading to overall warmer temperatures and changes in the atmosphere that increase the likelihood of extreme weather.

The next series of questions will ask you about carbon dioxide removal, which is the process of removing carbon from the atmosphere using technologies (like large filters) or approaches that help store more CO2 in soils and trees.

Having read the previous passage, do you have a favorable or unfavorable opinion of carbon dioxide removal?

[46] Carbon dioxide is a pollutant that contributes to climate change and is created during oil, gas, and coal production.

New technologies and practices are able to remove carbon dioxide emissions from the atmosphere.

Would you support or oppose Colorado allowing these carbon dioxide removal projects to be built in the state?

[48] Direct air capture (DAC) is a type of carbon dioxide removal which uses large fans to push air through a filter that captures the carbon dioxide. When the filter is full, it is heated up to separate and collect the carbon dioxide, which is then transported and stored deep underground in rock formations. Below is a photo of a DAC facility in Tracy, California.

Having read this, do you have a favorable or unfavorable opinion of direct air capture?

[52] Some communities have negotiated agreements with developers of new infrastructure projects in order to increase community input over local development projects.

A community benefits agreement (CBA) is one example of a legally binding agreement between a project developer and representatives of a community where a project is proposed to be built. A CBA describes benefits that the developer promises to provide to the community, such as local hiring, infrastructure investments, or funding for community programs, in exchange for the community's support for the project.

Do you support or oppose the use of CBAs for new development projects?

[57a] Phasing out the use of coal power to reduce the impacts of climate change may affect employment opportunities and income in the coal industry, while other types of energy sectors grow to address electricity needs.

Do you support or oppose Colorado lawmakers creating the following programs to address these potential employment and income impacts?

— Training and skill development to support workers in accessing new employment opportunities
