

From March 21 to 24, 2025, Data for Progress conducted a survey of 1,200 U.S. likely voters nationally using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and recalled presidential vote. The survey was conducted in English. The margin of error associated with the sample size is ± 3 percentage points. Results for subgroups of the sample are subject to increased margins of error. Partisanship reflected in tabulations is based on self-identified party affiliation, not partisan registration. For more information please visit dataforprogress.org/our-methodology.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=1,200 unless otherwise specified.

[1] How would you rate current federal disaster relief efforts – that is to say, efforts made by the federal government to respond to extreme weather events and the damage they cause?

[2] After an extreme weather event, like a wildfire or hurricane, elected officials in impacted states can request disaster relief funding from the federal government to help residents and communities recover from the damage caused by extreme weather events.

Which of these options best describes your view, even if neither is exactly right?
