ш DATA FOR **PROGRESS**

From March 17 to 24, 2025, Data for Progress conducted a survey of 854 likely voters in New York City using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and recalled presidential vote. The survey was conducted in English. The margin of error associated with the sample size is ±3 percentage points. Results for subgroups of the sample are subject to increased margins of error. Partisanship reflected in tabulations is based on self-identified party affiliation, not partisan registration. For more information please visit dataforprogress.org/our-methodology.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=854 unless otherwise specified.

[1] In the last year, have you experienced a change in prices for the following products? That is, are you paying more, about the same, or less?

- Groceries and food

[17] Some lawmakers have proposed creating municipal grocery stores in New York City to bring down the cost of groceries. These stores would be fully owned by the city government rather than a private entity or corporation.

Supporters of municipal grocery stores say this proposal would put people over profit by reducing food costs for low to middleincome households and providing residents with easy access to fresh and healthy food options, especially for those who currently live in neighborhoods where access to these options is limited.

Opponents of municipal grocery stores say this proposal would put too much of a financial strain on the city's budget and would force the city government to de-prioritize addressing other more important issues, including sanitization and policing. They say the city has other, more important crises to deal with than the cost of groceries.

[24] When thinking about the proposal to create municipal grocery stores in New York City, which of the following statements comes closest to your view, even if neither is exactly right?

Response	Topline	Democrat	Inde- pendent / Third party	Repub lican	Female	Male	Under 45	45+	No College	College	Asian	Black or African American	White	Latino
The city government should create municipal grocery stores. It will offer lower grocery prices for low to middle-income residents in comparison to privately owned grocery stores. The government should also prioritize these stores in neighborhoods that lack healthy food options and grocery stores in general.	63	70	53	55	60	68	70	59	61	66	58	69	56	69
The city government should not create municipal grocery stores. It will further strain the city's budget and take funding away from other important programs that are needed. The government should allow privately owned grocery stores to continue operating as is and allow grocery prices to fall naturally without interfering.	26	21	28	38	25	27	20	30	27	25	26	22	34	21
