

From March 20 to 23, 2026, Data for Progress conducted a survey of 1,193 U.S. likely voters nationally using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and recalled presidential vote. The survey was conducted in English. The margin of error associated with the sample size is ±3 percentage points. Results for subgroups of the sample are subject to increased margins of error. Partisanship reflected in tabulations is based on self-identified party affiliation, not partisan registration. For more information please visit dataforprogress.org/our-methodology.

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=1,193 unless otherwise specified.

[1] The following question randomized the order of statements.

When thinking about rising gas prices, which of the following statements do you agree with more, even if neither are exactly right?

Statement A: Elected officials should prioritize ending the war in Iran, which is why gas prices are rising in the first place.

Statement B: Elected officials should prioritize using all available temporary measures, like tapping the Strategic Petroleum Reserve and pausing the federal gas tax, to lower gas prices even if the war continues.
