

DATA FOR *PROGRESS*

Accountable Allies:

Appendices

DATA FOR *PROGRESS*

Methodology

Overview

The goal of the project is to begin to uncover the extent to which the fossil fuel industry funds higher education at both public and private schools across the US from 2010-2020.

Universities

- Private: Harvard, MIT, George Washington, Stanford, Columbia, Princeton, Georgetown, Colorado School of Mines, Rice, Duke, Vanderbilt, Brown
- Public: Arizona State, University of Texas at Austin, Florida State University, Georgia Tech, Ohio State University, University of Colorado Boulder, University of California Berkeley, Texas A&M, University of Michigan, University of Illinois at Urbana-Champaign, University of Washington, Montana State University (Bozeman), George Mason, Iowa State University

The list of universities is the culmination of 4 research priorities:

1. To gain a more comprehensive understanding of fossil fuel industry influence at select universities identified in the [ExxonMobil foundation worldwide giving reports](#), which provide one of the most transparent, though still far from fully transparent, accounts of university funding by an oil company. These universities include: George Washington University, Columbia University, MIT, Harvard University, Arizona State University, Ohio State University, and Georgetown University.
2. To gain a more comprehensive understanding of the scope of fossil fuel industry funding at universities that have already received [media attention](#) for their ties to the fossil fuel industry. These universities include: Texas A&M, University of Texas at Austin, Rice University, Colorado School of Mines, CU Boulder, Georgia Tech, and Iowa State University.
3. To unpack the influence of the fossil fuel industry at leading climate research universities, determined by referencing the [US News list](#) of best Environment/Ecology and the list of universities that [have most influenced IPCC reports](#), including Stanford, UC Berkeley, Princeton, Columbia University, Massachusetts Institute of Technology, University of Illinois, Duke, and University of Washington.
4. To explore the extent of fossil fuel industry funding at top Koch-funded universities, including George Mason, Florida State, and Brown University.

Scope

2010 - 2020

DATA FOR *PROGRESS*

Rationale for project scope:

1. Continuation of previous research/Team capacity: In 2010, the Center for American Progress released a [report](#) titled “Big Oil Goes to College,” including an analysis of fossil fuel industry funding at 10 US universities, many of which were researched in this project. The scope of this project began in 2010 in order to avoid overlap with the CAP report and maximize the efficiency of our research team’s limited time.
2. 990 constraints: The results of this project rely heavily on IRS form 990. It often takes 1-2 years until these forms become publicly available. Comprehensive 990 data is only available through the year 2020.

Funders

ExxonMobil Corporation, BP America Inc., Chevron Corporation, Shell Oil Company, ConocoPhillips, and Koch Industries.

Rationale for selected funders:

1. Size and influence: The selected funders are among the most powerful actors in the fossil fuel industry. ExxonMobil, Chevron, Shell, BP, and ConocoPhillips were selected because they are among the largest and most [influential](#) private oil companies in the world. Koch Industries, whose products include oil and natural gas, is the second largest privately held company in the United States.
2. Record of climate disinformation: All the selected funders have track records of disseminating climate disinformation, knowingly spreading false information with the intent to deceive or mislead the public regarding the causes and effects of the climate crisis. In 2021, executives from Exxon, Chevron, Shell, and BP were [subpoenaed](#) by Congress for their role in disseminating climate disinformation. In 2022, documents recently released by the U.S. House Oversight and Reform Committee [confirmed](#) that these four companies sought to portray themselves as transitioning toward clean energy sources despite failing to do so in practice. Research from Brulle and colleagues at Brown University identified the Charles Koch Institute and Foundation as one of the [largest funders](#) of the Climate Change Counter-Movement, “a complex network of organizations that function to obstruct climate action.”

Variables

1. Year: The resources used to extract data assume a variety of different time scales including fiscal year, calendar years, and school years. In some cases, grants were awarded to universities over the course of multiple years. This data is organized according to the year listed by the source. In instances where two years are covered

DATA FOR *PROGRESS*

(e.g., 2016-2017 school year), data is listed under the earliest year. For multi-year grants, the full value of the grant is listed under the year the grant began. Grants with timelines beyond the scope of this project are not omitted from the report.

2. **Recipient:** Recipient name corresponds with the name of the university listed in sources. It is important to note that some public schools funding is channeled to state-level foundations that represent multiple universities, such as the University of Colorado Foundation. In sources where a university foundation, rather than a specific university, is listed as the recipient of a donation, the name of the individual university is still listed (e.g., donations to the University of Colorado Foundation are listed as donations to the University of Colorado Boulder). In every case where a donation to a university is attributed to a specific university, that specific university is the largest in its respective public university system (e.g., CU Boulder is the largest university in the University of Colorado system).
3. **Amount:** Dollar amount reflects the dollar value found in the source. In certain cases, sources only disclosed the range of a donation value (e.g., \$100,000–\$499,999). In these cases, the dollar amount is represented by the minimum of the range. In cases where funding is distributed over a number of years, the dollar amount has been divided equally among those years.
4. **Source:** This project includes 5 source types.
 - a. **990 Form:** This project relies most heavily on IRS 990 forms. This form is completed by nonprofits (including foundations, institutes, and trusts) annually and details all donations made in that year. All of the funders analyzed in this project have foundation equivalents that donate to universities. Importantly, form 990s do not include donations made by corporations to universities. For example, the ExxonMobil Foundation is distinct from the ExxonMobil Corporation but funds universities.
 - b. **Foundation reports:** Some funders disclose funding details independently in the form of annual reports rather than through 990s. Such is the case with the ExxonMobil foundation. ExxonMobil foundation data from 2017 and onward comes from foundation reports rather than from 990s.
 - c. **School databases:** Though not required, some universities voluntarily disclose information regarding university gifts, grants, and contracts. Data was extracted from these databases when available.
 - d. **School reports:** Some colleges within universities choose to release annual reports containing school-specific donor information. Data was extracted from these databases when available.
 - e. **News articles:** In some cases funding agreements not found elsewhere were found in news articles covering a university's receipt of a donation.

Note on Pledged vs. Donated Funds

DATA FOR **PROGRESS**

Funding identified through 990 forms, foundation reports, school databases, and school reports represent a concrete confirmation that a university received funds from a fossil fuel company; these are considered “Donated Funds.” On the other hand, funding identified in new articles typically represents long-term funding *commitments* made by a fossil fuel company. There is often no way to confirm that fossil fuel companies follow through in pairing these “Pledged Funds” to universities. In some cases, fossil fuel companies have been known to back out of or cut short their initial pledges. Changes made to pledged funds that were also publicly reported on have been taken into account. In the appendices that follow, pledged funds are demarcated with an asterisk.

In certain instances, we uncovered donated funds that coincided with the timeframe of pledged funds. Pledged funds are only listed alongside donated funds from the same year in cases where we could confirm that the donated funds fell outside the scope of pledged funds for that year. In cases where we could not confirm overlap between pledged funds and donated funds for a given year, only the highest value of the two choices was factored into the total sum.

Note on Funding from Princeton:

Data for Princeton was collected entirely from annual reports of the University Research Board and the Office of Research and Project Administration.

Reports from 2011-2018 show total ‘anticipated funding’ for each project with a start and end date. Annual quantities here were estimated by dividing the most recent and specific amount associated with each project – which usually reflects actual money spent to date versus just a projection – by the number of years

Reports from 2011-2015 show multiple subcontracts under each main contract. These were aggregated to find total anticipated funding.

Reports from 2019-2021 show specific annual amounts per project. In cases where funding flowed into 2019-2021 from 2018 and before, specific annual amounts were subtracted from the total before dividing by years remaining.

Appendix A: Fossil Fuel Companies and Affiliates That Have Financially Contributed to Arizona State University

This list cannot fully capture the extent to which the listed fossil fuel companies and their affiliates have contributed to these universities monetarily and otherwise. None of these

DATA FOR *PROGRESS*

universities disclose the entirety of their funding publicly. A majority of the listed fossil fuel companies and their affiliates do not have consistent disclosure of their funding. The totals listed here should be considered the lower end of what these fossil fuel companies and industry affiliates have actually contributed to these universities.

An interactive version of this list can be found on the Accountable Allies project page [here](#).

Funder	Year	Amount
ExxonMobil	2015	\$75,000
	2016	\$75,000

TOTAL		\$154,302,577

DATA FOR *PROGRESS*

**According to University officials, the University of California, Berkeley received \$15.1 million from Chevron, \$4.5 million from Exxon, \$5.7 million from Shell, \$0.27 million from Conoco, and upwards of \$122.1 million from BP from 2010 - 2020. Because most of this information is not publicly available, cumulative values provided by the university were divided evenly from 2010-2020. A 10 year, [\\$500 million](#) pledge from BP and a 5 year, [\\$25 million](#) pledge from Shell (both of which were also shared by the University of Illinois and the Energy Biosciences Institute) stand out as the largest industry donations to Berkely to be publicly reported on. In 2015, BP [revoked \\$75 million](#) in funding from its initial \$500 million pledge.

TOTAL		\$45,421,866

***Pledged funds** (for more info on pledged vs. donated funds, see section titled "Note on Pledged vs. Donated Funds" in the Methodology section)

NOTE: For Shell funding from 2011-2014, \$1.5 million per year is derived from pledged grants while remaining values from 2011-2014 are derived from confirmed donations. For Shell funding in 2012, an additional \$3.9 million was pledged.

Appendix Z: Fossil Fuel Companies and Affiliates That Have Financially Contributed to University of Washington

Funder	Year	Amount
Koch Foundation	2018	\$5,000
	2019	\$10,000

DATA FOR *PROGRESS*

	2020-	\$125,000
Shell Oil	2012	\$10,880
	2013	\$13,630
	2014	\$23,440
	2015	\$18,195
	2016	\$7,810
	2017	\$11,306
	2018	\$10,097
	2019	\$10,200
	2020	\$5,496
TOTAL		\$126,054

Appendix 1A: Fossil Fuel Companies and Affiliates That Have Financially Contributed to Vanderbilt University

Funder	Year	Amount
Shell	2012	\$2,475
